

FCC,

I have been a listner on XM-Radio for almost a year now. I listen while driving a 'Big Rig' around the countryside. Having weather and traffic for local areas is a must for safe driving.

XM-Radio provides a single source for up to date traffic and weather. There are times when the local stations are not in range but the XM solution is available.

I would ask that you reject the NAB's petition (04-160) and support XM's ability to provide the listening solutions I need and enjoy.

Thanks,
